Abstract (en)

[origin: EP3301656A2] An alarm system (100), comprising: at least one motion sensor (102); at least one audio capture device (104), adapted to continuously record an audio signal; and at least one hardware processor (101), electrically connected to the at least one motion sensor and the at least one audio capture device, and adapted to: receive (301) a signal from the at least one motion sensor indicating detection of a moving object; receive (302) at least part of the audio signal from the at least one audio capture device; analyze (304) the at least part of the audio signal to determine a presence of at least one vehicle sound; identify (308) a correlation between the detection of a moving object and the determination of at least one vehicle sound presence; and decrease (309) sensitivity of at least one sensor of the alarm system for at least a predetermined period of time.
