Abstract (en)
[origin: WO2016193717A1] The invention relates to improvements in articles for foot care, for example foot care devices, footwear and insoles for footwear. A body of discrete operative members (30) is provided, the operative members (30) each having a tip portion (31) for interaction with a human or animal foot (40). In use, the operative members (30) can be resiliently deformed by engagement with the foot (40). The operative members (30) of the invention can thus provide cushioning and stimulation to a user.
