Abstract (en)
[origin: WO2016191891A1] The invention relates to a floor-cleaning machine (1), comprising a cleaning device (2), a drawbar (3) that comprises a first arm (4), which at a first end (5) is pivotably mounted about a first axis of rotation (7) on the cleaning device (2), and which has a second end (6), and comprising an operating console (8) that is arranged at the second end (6) of the drawbar (3). By swiveling the drawbar (3) around the pivotably mounted first end (5) in a swivel plane (9) that is orthogonal with respect to the first axis of rotation (7), the second end (6) can be lifted and lowered, wherein the drawbar (3) comprises a second arm (10), which at a first end (11) is pivotable mounted about a second axis of rotation (13) on the cleaning device (2), and which is provided with a second end (12). The operating console (8) is connected pivotably about a third axis of rotation (14) to the second end (6) of the first arm (4), and is connected pivotably about a fourth axis of rotation (15) to the second end (12) of the second arm (10), wherein the four axes of rotation (7; 13; 14; 15) extend parallel to one another, and penetrate the swivel plane (9) substantially in the corner points of a parallelogram.
