Abstract (en)
[origin: WO2016193313A1] Said method is used to produce at least one injectable-product reservoir assembly (8) for an injection pen. The method comprises at least the sequence of steps consisting of: producing a hollow housing (30) equipped with a first mechanical member (31) for attaching a needle and a second mechanical member (38) for attaching the housing onto an injection pen; inserting (F6) an elongate container (20) having an open bottom (222) into the housing; and filling the container with a predetermined quantity of injectable product, through an opening (O20) of the open bottom (222) of the container (20).
