Abstract (en)
[origin: WO2016190734A1] Device (1), provided and arranged as a yo-yo toy, comprising two rotary bodies (2) connected to each other by means of a connecting shaft (3), wherein each of the rotary bodies comprises a base portion (4) and a therewith connectable or connected frame part (5), which is configured, optionally partly in cooperation with the base portion, for attaching a number of hexagonal covering elements (6). The covering elements and the half-hexagonal segments (8) of the base portions are arranged and/or coloured in such a way that the device strongly resembles a football or basketball. The covering elements are snap-action connectable with the frame parts and the base portions respectively, and are interchangeable with covering elements of, for example, a different colour, texture and/or lettering.
