Abstract (en)

[origin: WO2016198268A1] The present invention relates to a beard trimmer comprising a handle (18) and a casing (5) as well as a cutting system comprising one or more rotating cutting heads (1), said rotating cutting heads comprising a movable blade (2) and a stationary blade (3), each head being surrounded by a crown-shaped comb (4), said comb being height adjustable and making it possible, during use, to adjust the distance between said blades and the skin and thus to cut the beard hairs to the desired length. The invention is characterized in that said casing is movably mounted on said handle, making it possible to create a gap (6) between the casing and the handle in order to rinse the cutting system.
