Abstract (en)
[origin: WO2016188758A1] The invention relates to a device (100) for connecting a coupling shaft (1) to a car body of a track-guided vehicle, wherein the device (100) has a pivot element (10) connected to the coupling shaft (1) and a mount (20) that can be connected to the car body, to which mount the pivot element (10) is articulated by means of at least one pivot pin (2, 2') in such a way that the pivot element can rotate in a horizontal plane. According to the invention, the at least one pivot pin (2, 2') is designed as a shock protector and, for this purpose, has a bearing disk (3, 3') having a concentrically arranged cut-out (5, 5') and has a shear-off element (4, 4') having a predetermined breaking point or separating region (9, 9'). A mount-side region (6, 6') of the shear-off element (4, 4') is accommodated in the cut-out (5, 5') of the bearing disk (3, 3'), and a pivot-element-side region (8, 8') of the shear-off element (4, 4') is accommodated in a pin seat (7, 7') of the pivot element.
