Abstract (en)

[origin: WO2016192978A1] The present invention relates to a cooling device (1), for example a refrigerator or a freezer, comprising a body; a compressor (2) that enables the refrigeration cycle to be performed; a condenser (3) that enables the refrigerant fluid to be condensed; a fan (4) providing the cooling of the condenser (3) by blowing air thereon; a casing (5) wherein the compressor (2), the condenser (3) and the fan (4) are placed; a panel (7) that forms the rear and upper wall (8 and 9) and the body base (10) of the casing (5); a support member (6) that is disposed inside the casing (5) and whereon the compressor (2), the fan (4) and the condenser (3) are fixed; an opening (A) along the support member (6) that remains between the support member (6) and the rear wall (8) and a cover mechanism (11) covering the opening (A) at the level of the fan.
