Abstract (en)
[origin: CA2984206A1] The invention relates to a smoke munition (1) or smoke grenade which can be fired from a launcher, for example a grenade launcher, and has at least one submunition (3) for producing smoke (18) as a protection for ships. To achieve the effect that the submunition (3) of the smoke grenade (1) can be delivered quickly and safely for the ship's crew and the active compound (30) thereof can be converted completely into smoke (18) even after hitting the water, the invention proposes providing the submunition (3) with a floating aid (14), which can be deployed before the submunition (3) hits the water and prevents the submunition (3) from sinking and prevents the active compound (3) that produces the smoke (18) from becoming wet.
