Abstract (en)
[origin: WO2016193239A1] The invention relates to a glasses frame (1) comprising a main frame (2) provided with two openings (3) for respectively receiving two lenses, at least one opening (3) comprising an inner peripheral edge (30) for cooperating with an outer peripheral edge of a lens, the glasses frame (1) comprising at least one functional member (5, 6). According to the invention, the peripheral inner edge (30) of said opening (3) of said frame comprises at least one recess (31) in which said functional member (5, 6) is mounted, said functional member (5, 6) being designed so as to be locked in position by said lens when it is mounted in said opening (3).
