Abstract (en)

[origin: WO2016193217A1] The invention relates to a method for operating a robot (1) at a robot workstation, and an associated robot (1) and robot workstation, wherein the robot comprises a control device (10) that is designed and/or configured to specify a status type to be monitored of the robot workstation or of the robot (1), to monitor a status parameter corresponding to the status type of the robot workstation or of the robot (1), to specify a limit value for the monitored status parameter of the robot workstation or of the robot (1), to move the robot arm (2) in a manually guided manner via the manual application of forces on one or more of the members (L1-L8) in order to adjust the joints (J1-J7) of the robot arm (2), and to generate a vibration on the robot arm (2), controlled via the control device (10), during the manually guided movement, if the monitored status parameter reaches the specified limit value.
