Abstract (en)
[origin: WO2016188616A1] Electrical plug connectors (10) are used to establish electrical contacts between a circuit board (18) and an external connection means. For this purpose, a plurality of pins (14) forming electrical connections are frequently allocated to the plug connector (10). Electrical plug connectors (10) are known in which the installation of the plurality of pins (14) is difficult due to the limited space and therefore time-consuming and prone to vibrations. The invention provides an electrical plug connector (10) that is easy to produce and very robust. For this purpose, a lead frame (19) which has at least one conductor (15) is securely arranged in a holder (20).
