Abstract (en)
[origin: CN105278811A] The invention discloses a screen display device and method of an intelligent terminal. The screen display device comprises an intelligent configuration module, an intelligent processing module and an intelligent display module, wherein the intelligent configuration module is used for setting screen display parameters corresponding to an application program, and the screen display parameters comprise a display window parameter, and/ or a display resolution and/ or a display area parameter; the intelligent processing module is used for obtaining the screen display parameters corresponding to an application program which is currently operated, and carries out data processing of the display window parameter, and/ or the display resolution and/ or the display area parameter on the application program which is currently operated according to the obtained screen display parameters; and the intelligent display module is used for outputting and displaying a data processing result of the intelligent processing module. The electric quantity consumption of the intelligent terminal can be lowered, and operation efficiency is improved.
