Abstract (en)

[origin: WO2016192693A1] Problem to be resolved: Distribution of community television and radio signal is performed individually. Antennas (4, 12) of the subscribers make the concerned buildings unsightly, construction adjustments must be completed on the residential buildings and all the subscribers must purchase their own receivers (14) and decoders (15). Solution: The apparatus (13) for community reception and distribution of television and radio programs allows installation of a limited number of antennas (4, 12) on residential buildings with numerous subscribers and it allows to use the existing coaxial distribution system with star topology in the building and the apparatus (13) made according to one of the examples of practical embodiment that allows data communication.
