Abstract (en)

[origin: WO2016192746A1] A method and apparatus may include receiving a request for a recommended action from a network node. The request comprises an event information and a context information. The method may also include performing a similarity analysis to determine if the apparatus has stored a self-operation case that relates to the request. The method may also include determining a recommended action based on the similarity analysis. The method may also include transmitting the recommended action to the network node.
