Abstract (en)

[origin: CN107856969A] The invention relates to a device (10) and a method for producing a bag package (1) by means a packaging material belt (20). The device is provided with the components of at least one molding device (13,106) for molding the bag package (1) by means of the packaging material belt (20), and at least one sealing device (45,60,74) which is used for constructing at least one longitudinal seam and/or transverse seam (5) of the bag package (1), wherein at least rubber applying station (9) is arranged through which a rubber covering layer (82) can be applied to the packaging material belt (20) which is made of paper for fixing at least one pouring-out part (78) on the bag package (1). At least one sealing unit (86) is arranged for re-activating the rubber covering layer (82), and particularly liquidifying for fixing the pouring-out part (78) on the bag package (1).
