Abstract (en)

[origin: EP3305701A1] A yarn winding system 1 includes: a spinning frame 3 configured to form a yarn supply bobbin 11; and an automatic winder 4 configured to wind yarn 14 from the yarn supply bobbin 11 to form a package 15. The spinning frame 3 includes an output unit 31c configured to output winding information related to a winding state of the yarn 14 in the formed yarn supply bobbin 11. The automatic winder 4 includes: an acquisition unit 41c configured to acquire the winding information from the spinning frame 3; a winding unit 43b configured to unwind the yarn 14 from the yarn supply bobbin 11 and wind the unwound yarn 14; and a control unit 52 configured to control winding operation of the winding unit 43b. The control unit 52 determines a winding speed of the yarn 14 in the winding unit 43b, based on the winding information acquired by the acquisition unit 41c.
