Abstract (en)

A clothes dryer includes a clothes drying drum, a front wind channel and a door body. A drying bracket is provided in the clothes drying drum, and one end of the drying bracket is connected onto the front wind channel in a hanging manner. The front wind channel is provided with a hook for connecting the drying bracket in a hanging manner, and the hook and the front wind channel are set in an integrated manner. Under the premise of not influencing the mold stripping of the front wind channel and the normal use of the hook, the mold stripping manner of the front wind channel is improved, thereby eliminating the contradiction of the mold stripping directions of the hook and the front wind channel, reducing the mold cost, improving the production efficiency, and improving the intensity of the hook.
