Abstract (en)

[origin: CA2981333A1] The radiating element (10) includes a cavity (11) that is axially symmetric about an axis Z, a metal central core (12) that extends axially at the center of the cavity and N different successive metal elliptical planar elements (131, 132, ..., 13N) that are stacked on top of one another parallelly to the lower wall (15) of the cavity, the central core including a lower end that is fastened to the lower metal wall of the cavity and an upper end (16) that is free, each elliptical metal planar element being centered in the cavity and secured to the central core, the N elliptical planar elements being regularly spaced and having dimensions that decrease monotonically between the lower end and the upper end of the central core, where N is an integer higher than 2.
