Abstract (en)

[origin: US2018168343A1] The invention relates to a drawer having a bottom panel, two side walls, a back wall, and a facing. The facing can be connected, via two fitting elements located on the back, to fitting elements that are built into the face end of the side walls. The side walls are secured on drawer slides. The side walls can be made longer via the fitting elements for side wall parts that receive the fitting elements on the back of the facing and are flush with the bottom panel. The fitting elements for the fitting elements of the facing are accessible in the side wall parts via recesses in the side wall parts. The recesses in the side wall parts are coverable via slip-on coverings.
