Abstract (en)

[origin: WO2016198447A1] The invention relates to a device comprising: a transferable seat assembly including at least an upper part, or movable seat (1); and at least two lower stationary parts (2) that can be secured to chairs, the upper face of each of said stationary parts having guide means for guiding the movement of the seat (1) along same perpendicularly to the sagittal plane of the passenger seated on the seat (1), said guide means cooperating with complementary guiding means (4) provided on the lower face of the seat (1), with a vertical and horizontal clearance therebetween. The seat rolls on balls (7) distributed outside the guides and supports the weight.
