Abstract (en)  
[origin: WO2016198295A1] A profile arrangement (30) as a constituent part of an extraction device (10), in particular of a laboratory extraction device (10), having an aerator profile (40) which has a longitudinal design and in which an air duct (31) is provided for conducting feed air (Z) for aerating a working chamber (19) of the extraction device (10), wherein the aerator profile (40) has a support bracket (47) for supporting a load-bearing profile (50) which has a charging means receptacle (51) for receiving charging means for electrical conditioning of the feed air (Z), wherein the aerator profile (40) has at least one feed air outlet (49) which is arranged in the region of the support bracket (47) and through which outflowing feed air (Z) can flow past the charging means in the direction of the working chamber (19). It is provided in the case of the profile arrangement (30) that a plug-in connection (34) is provided between the load-bearing profile (50) and the aerator profile (40), in which plug-in connection (34) a load-bearing profile plug-in socket (36) or a load-bearing profile plug-in projection of the load-bearing profile (50) can be plugged onto an aerator profile plug-in projection (35) or onto an aerator profile plug-in socket of the aerator profile (40) along a plug-in movement path (33), and that at least one fixing means (37) is provided for fixing the plug-in connection (34) between the load-bearing profile (50) and the aerator profile (40).
