Abstract (en)

[origin: WO2017190799A1] The present invention relates, inter alia, to a method for operating an electromechanical or electrohydraulic implement or rescue equipment (1) which can be carried by an operator and used autonomously, having at least one movable tool insert (2), preferably a cutting tool, a spreading tool or a lifting tool, a housing (3), an electric motor (4), a pump (5) driven by the electric motor (4) or a mechanical transmission which is driven by the electric motor (4) and respectively has the purpose of activating the tool insert, an exchangeable, rechargeable electrical energy source (6) which is accommodated on the equipment side in or on the implement or rescue equipment (1), wherein during the operation of the implement or rescue equipment (1) operational data thereof and/or of the energy source (6) are collected, the operational data is transferred into a data carrier or data memory (6d) which is accommodated in the electrical energy source (6), the electrical energy source (6) is removed from the implement or rescue equipment (1) and connected to a charger device (8), and the operational data which is stored in the data carrier or data memory (6d) of the electrical energy source (6) is read out by the charger device (8) and transmitted onward to a network (21).
