Abstract (en)
[origin: WO2016202360A1] A method and system for adapting a vehicle control strategy of an on- road vehicle following a reoccurring fixed route to a predetermined destination, which fixed route extends through at least one geographical zone associated with at least one environmental restriction. When it is determined that the vehicle is approaching the geographical zone, historical data collected from previous passages of one or several vehicles through the zone is accessed, and the vehicle control strategy inside the geographical zone is adapted based on the historical data and the environmental restriction. The invention is based on the insight that vehicles travelling along a reoccurring route may have significant use of historical data relating to previous passages along the route when adapting a vehicle control strategy.
