Abstract (en)

[origin: WO2016202536A1] An active material for an electrochemical energy storage means, especially for a lithium cell. In order to increase the lifetime of the electrochemical energy storage means, the active material is based on the general chemical formula: $x(\text{LiMO}_2) : 1-x(\text{Li}_{2-y}\text{NayMn}_{1-z}\text{M}'\text{zO}_3)$, where M is nickel and/or cobalt and/or manganese and M' is niobium and/or tungsten and/or molybdenum and where $0 < x < 1$, $0 < y < 0,5$ and $0 < z < 1$. The invention further relates to an electrode material and to an electrode comprising this active material, to a process for production thereof and to an electrochemical energy storage means equipped therewith.
