Abstract (en)

[origin: EP2522561A2] The method involves providing a safety device (2) with connecting links (18,19) and arranging an additional circuit device (5) of an additional safety device in course of connecting links. A safety condition of the safety device is increased, when it is decreased by the additional circuit device. The safety condition of the safety device is increased by reducing the test intervals. An independent claim is included for a safety assembly for rail transport.
