Abstract (en)

[origin: WO2016202845A2] The present invention relates to a plastic element for a vehicle, wherein the plastic element is designed as an extrusion part or as an extrusion part having a base, wherein at least a portion of the outer side of the extrusion part is coated with a paint film for forming the plastic element with a structured surface. The structured surface preferably has a structure that matches a painted surface as closely as possible, wherein the extrusion part is produced from a plastic material or a mixture of a plastic material and particles, the particles being made of a material which does not or as little as possible melt with the plastic material in order to form a structured surface of the extrusion part. In order to form the structured surface of the plastic element, the paint film reproduces the surface, which has been structured by the admixed particles, of the extrusion part and/or the surface of the paint film is structured by at least one structuring device in order to form the structured surface of the plastic element.
