Abstract (en)

[origin: WO2016202865A1] The gusset style pouch (1) is provided with a resealable closure system (2) configured to selectively define a top opening (7) of the pouch, at the opposite from a bottom (3), at least one strip (8, 9) of this system (2) being adapted for locking an open configuration, by engaging locking elements that pivot and cause interengagement between the strips of the closure system. The locking elements (41) are integrally formed with at least one strip (8) of said system and made of a semi rigid plastic material, less flexible than material of the pouch sidewall. An elongated predetermined measuring utensil (100) of shorter length than height (H) of an interior pouch volume can be stored along the sidewall by use of a holding part (55) formed on the strip (8) as a lower extension. A leveling can also be performed using a free edge (56) below the interlocking area.
