Abstract (en)
[origin: WO2016202792A1] The invention relates to a pulley block, in particular a lower block (1) for tackles, comprising at least one pulley (2), which is surrounded by a covering hood (6) having inlet and outlet openings (7) for a load cable (3), wherein a covering element (8) is inserted into at least one of the inlet and outlet openings (7) and is retained in the inlet and outlet opening (7) by means of a retaining strip (8c) that reaches behind an edge (7a) of the inlet and outlet opening (7), the covering element (8) has an opening (9) for the load cable (3), and the opening (9) in the covering element (8) is less than the inlet and outlet opening (7) in the covering hood (6), wherein the covering element (8) is divided into a first covering part (8f) and a second covering part (8g) in such a way that, in order to mount the covering element (8) on the covering hood (6), while the load cable is (3) in a reeved state, the first covering part (8f) and the second covering part (8g) can be inserted into the inlet and outlet opening (7) by means of the retaining strips (8c) of the first covering part and the second covering part, then reach behind the edge (7a) of the inlet and outlet opening (7), and finally can be joined in order to form the covering element (8) in a mounted installation state.
