Abstract (en)

[origin: WO2016203173A1] The part-carrier for electrolytically treating geometrically complex parts comprises a reinforcement (2) vertically supporting supports (3) that are movable in rotation and designed to carry the parts (6) to be treated, and a control member (8) which, when activated, pivots the movable supports (3) in sequence to either side of a neutral initial position. Application to electroplating.
