Abstract (en)
[origin: WO2016202941A2] The invention relates to a solar device which is of a simple and cost-effective construction. It is proposed that the solar device comprises the following: a solar element that can be subjected to solar radiation; a support device for receiving the solar element; a movement device for moving the support device together with the solar element arranged thereon for adapting the alignment of the solar element relative to a current sun position.
