Abstract (en)

[origin: CN107974877A] The invention relates to a wing rail (14, 16) of a frog (10) comprising a core block (12) with rigid frog point (18), which is connected by spacer elements with the wing rails, and wherein in the region of the frog tip a wheel passing region (R) between the heart block and the wing rails runs. The wing rails (14, 16) respectively have a section extending over at least the length of the wheel passing region (R) and at least one end section connected to the section (22, 24) on the soft start side and/or soft end side. The section is made of a forged block with integrally machined spacers.
