Abstract (en)

[origin: WO2016207360A1] The invention relates to a white-water river, comprising a river bed (1) capable of guiding a current of water (12) between an upper inlet of the bed and a lower outlet of the bed, and including water-feeding means for injecting a stream of water (12) at the upper inlet of the bed. The river bed (1) is made up of a series of individual bed modules (6a), adjacent to one another, and assembled via respective transverse contact surfaces. The individual bed modules (6a) are supported via a lower surface (61) by a modular lattice bearing structure (16).
