Abstract (en)
[origin: WO2016207499A1] The invention relates to a device for bending profile members in which the bending head comprises at least one stage for bending the profile members and cutting said profile members after bending, provided with means for cutting the profile members including a pre-cutting member (45) suitable for starting the cutting of the profile members, and a cutting member (27) suitable for finishing the cut started by the pre-cutting member (45).
