Abstract (en)

[origin: WO2016207006A1] The invention relates to a filling element for the controlled dispensing of liquid contents or of a liquid product into packages (2). Said filling element comprises at least one liquid channel (3) in which at least one liquid valve arrangement is provided that can be controlled between a state in which the dispensing of the liquid contents to the package via at least one dispensing opening of the liquid channel is enabled in a filling phase, and a state in which the liquid channel is blocked, thereby blocking the dispensing of the liquid contents.
