Abstract (en)

[origin: US2018119468A1] A control device for controlling the movement of a corner cabinet door of a corner cabinet, wherein the corner cabinet door has a first door element which is mounted on the cabinet carcass in the vicinity of the door opening by means of a door bearing device and a second door element which is mounted swivelably on the first door element via swivel bearing means, with a base part which can be fixed onto the cabinet carcass and a control part which is mounted on the base part so as to be moveable between an inner position and an outer position in which it projects beyond the plane of the door opening, wherein the control part can be coupled with the second door element when closing by means of coupling means and uncoupled when opening, such that it controls the movement of the second door element at the end of the closing phase and at the beginning of the opening phase.
