Abstract (en)
[origin: WO2017005633A1] In order to create a forgery-proof security feature, a security or value document (100) is disclosed which is formed from a document body (150). The document body (150) is produced by laminating at least two polymer layers (120, 130, 140) connected to each other and comprises at least one window region (210, 210', 210''), wherein in the at least one window region (210, 210', 210'') there are at least one absorption element (300, 300', 300'') and at least one luminescent element (400) overlapping with the at least one absorption element (300, 300', 300''). At least the at least one absorption element (300, 300', 300'') is formed using a thermoplastic material.
