Abstract (en)
[origin: GB2540050A] Container 4 having a closure 2 mounted thereto, wherein the container includes an opening defined by a neck 6 with a central axis. The closure includes a lid 14 and body 12 made of plastic, and the body defines a conduit. The lid is movable from an open to a closed configuration, and covers the open mouth 20 of the body in the closed configuration. The body includes an external face 22 which overlaps an internal face 24 of the lid when the lid is in the closed configuration. The body and lid cooperate with one another to provide snap-fitting engagement (see e.g. parts 26, 28) between the two to secure the lid in the closed configuration. In another aspect of the invention the body is mounted onto the container specifically by a screw thread arrangements 34/42, and the body and lid cooperate with one another to provide engagement therebetween.
