Abstract (en)
[origin: WO2017001083A1] The invention relates to a stackable storage container with a body (1) and a lid (2). Lateral walls (11) of the body (1) are provided with latching arms (3), and the body (1) has feet (12). The lid (2) has first latching cams (22) on the upper face, and the feet (12) of the body (1) engage between the first latching cams (22) when the body is stacked on the lid (2). In a first configuration in which the lid (2) is placed on the edge, the latching arms (3) can be latched with the first latching cams (22) of the lid (2) in a first latching position. In a second configuration in which a similar body is stacked on the edge, the latching arms can be releasably latched with the second latching cams of the feet (12) in a second latching position, and in a third configuration in which the lid (2) is placed on the edge (14) and a similar body is stacked on the lid (2), the latching arms (3) can be releasably latched with the first latching cams (22) of the lid (2) by covering the latching cams (22), thereby simultaneously clamping the feet of the similar body between the latching arms and the latching cams, in a third latching position.
