Abstract (en)
[origin: WO2017004170A1] A blank sheet material is used to form a package. The blank sheet of material includes a plurality of support panels coupled to a plurality of individually wrapped articles. The plurality of support panels includes a first support panel coupled to a first set of individually wrapped articles and a second support panel coupled to a second set of individually wrapped articles. The blank also includes at least a first end panel coupled between adjacent support panels. The first support panel is coupled to the first end panel at a first fold line and the second support panel is coupled to the first end panel at a second fold line. The first end panel includes a first length defined between the first and second fold lines, and the plurality of support panels are configured to at least partially overlap each other when the package is formed.
