Abstract (en)
[origin: WO2017001338A1] The present invention relates to a method for adjusting a gap (5) between a stator (10) and a rotor (11) of a phase shifter (1) for an adjustable camshaft (12), the stator (10) being connected to an outer shaft (13) and the rotor (11) to an inner shaft (14) of the adjustable camshaft (12), so that the phase position of the inner shaft (14) is adjusted relative to the phase position of the outer shaft (13) when the rotor (11) is rotated in the stator (10), and the gap (5) being formed between at least one sliding surface (15) on the stator (10) and at least one sliding surface (16) on the rotor (11). The method according to the invention comprises at least the following steps: coating at least one of the sliding surfaces (15, 16) with a gradually removable coating (17); assembling the phase shifter (1), comprising joining the rotor (11) in the stator (10); activating the phase shifter (1) by rotating the rotor (11) in the stator (10) and adjusting the gap (5) between the stator (10) and the rotor (11) by abrading at least a partial thickness of the coating (17). The invention further relates to a phase shifter (1) which comprises such a coating (17).
