Abstract (en)

[origin: WO2017001064A1] The invention relates to a thermostat for heating, air-conditioning and/or ventilation systems, comprising a main part, a temperature sensor arranged on the main part, an actuator arranged on the main part, and a housing that at least partially encloses the main part. In order to simplify operation of the thermostat, a control circuit detects operation of the thermostat on the housing and activates a tactile feedback in response to a detected operation.
