Abstract (en)  
[origin: EP3318506A1] A first sheet material is easily taken out while sheet materials are prevented from being continuously taken out when a second sheet material and after are taken out. A dispensing container (10) configured to maintain a sealed state has a longitudinal direction (front and back direction) (C) and a lateral direction (B), and includes a container main body (11) having an upper surface provided with a dispensing opening (24) for taking out sheet materials (9) contained and an upper lid (12) mounted to the upper surface of the container main body (11) via a hinge (38). The dispensing opening (24) includes a first opening part (24a) positioned on the side of the hinge (38) and a second opening part (24b) continuing from the first opening part (24a) extends toward the opposite side of the hinge (38) in the lateral direction (B), and enables the sheet material (9) to pass through. The first opening part (24a) has a length (e3) in the lateral direction (X) longer than a length (e4) of the second opening part (24b) in the lateral direction (X).
