Abstract (en)
[origin: WO2017005932A1] A chair for chairlifts comprises at least one seat portion (4) that can pivot about an axis, and an elastic element (2) between the seat portion (4) and a frame (7) of the chair. An actuation mechanism that is connected to the seat portion (4) allows the seat portion (4) to pivot downward counter to the force of the elastic element (2) and lock the seat portion (4) in said position in order to make it easier for chairlift users to get on and off the chair.
