Abstract (en)

[origin: WO2016200268A1] Assembly (20) for adjustable attachment of a pole, beam or similar (100) to a fundament (80) intended to be inserted into the ground, which assembly (20) includes: - a lower mainly elliptic plate (30) fixed at upper end of the fundament (80), which mainly elliptic plate (30) is provided with through holes (32) at ends thereof, - a mainly square, rectangular or circular adjustment plate (40) provided with longitudinal recesses (41) at two of its opposite sides, and that at least two of its corners are provided with through holes (42), - an upper mainly elliptic plate (50) provided with through holes (51) at ends thereof, where the two elliptic plates (30, 50) is attached to each other by means of fastening means and where the adjustment plate (40) is adjustable in the horizontal plane between the two elliptic plates (30, 50) by means of the recesses.
