Abstract (en)
[origin: WO2017005338A1] A hydraulic unit, in particular for supplying pressurized liquid to conveying and lifting mechanisms, comprising a tank (7) that is located at the end in relation to a main device axis (9), and functional components that are mounted on the tank (7) and consist in at least one hydraulic pump (1), a connecting element (5) and an electric motor (3) for driving the hydraulic pump (1), is characterized in that the connecting element (5) is composed of at least one structural unit (11) and at least one other structural device (13) and in that at least part of the one structural unit (11) is accommodated in the other structural device (13).
