Abstract (en)
[origin: CA2991362A1] The invention proposes a weapon (100) having a barrel cluster (1), comprising at least one, preferably multiple, weapon barrel(s) (2, 3, 4) and comprising a bolt (50), wherein only one of the weapon barrels (2) is oriented in alignment with the single bolt (50) and interacts therewith for the purposes of firing. The barrel cluster (1) has a front, muzzle-side barrel holder (5) and has a rear, bolt-side barrel holder (6), and has, in a partial region (7), a control body (8) with a control cam (9) which is incorporated on the circumference. By way of said control cam (9), the barrel cluster (1) can be adjusted as a whole and independently of the firing of the weapon (100). The control body (8) is preferably electronically rotated, for which purpose a pin (11) of the actuator (10) engages into the control cam (9) of the control body (8).
