Abstract (en)

[origin: WO2017036715A1] The invention relates to a winding arrangement (22) of a transducer (1). The winding arrangement (22) comprises a rim electrode (43) which has a hollow cylindrical electrode central portion (57) and two annular shielding collars (59) that form opposite ends of the rim electrode (43). Each shielding collar (59) is connected to the electrode central portion (57) and is curved outwardly relative to the electrode central portion (57).
