Abstract (en)

[origin: WO2017009548A1] The invention relates mainly to a rotary electric machine (10) comprising: a casing (16), a stator, a plurality of ducts extending between the said stator and the said casing (16) for the passage of a cooling liquid, characterized in that the said casing (16) comprises a plurality of openings (77) each opening via one of their ends to the outside of the said rotary electric machine (10) and via another of their ends onto the side of the said ducts.
