Abstract (en)
[origin: WO2017004830A1] A technique for controlling a cluster of radio access nodes for radio communication with a user equipment is described. As to a method (200) aspect of the technique, information is received (202) from at least one of the user equipment and the radio access nodes, wherein the information is indicative of a radio quality (904-908) of the radio communication. Based on the received information# a number of radio access nodes that redundantly communicate with the user equipment is changed (204).
